## Summary

In 2018, I went through the programming (Java) course provided by FasttrackIT with great success, gaining the necessary knowledge to understand how an application works. During this time I've also managed to build my very first Java desktop app using JavaFX, JDBC and MySQL. Through this course I've also obtained a Professional Qualification Certificate (Programmer Analyst).

In 2019 I've started working, having my first job actually, as a Web Scraper (Analyst Programmer) where:

- I learned many new things about how websites are structured and where to search for certain information and extract it from the said websites using XPath and Regex,
- I also mainly worked with web crawlers and got familiarized with how they work.
- Due to the fact that I was mostly working with ads, since we were extracting information for an ad search engine, I got pretty much used to what makes ads more efficient when it comes to online marketing.

During the 2020 pandemic, since I've stopped working as a Web Scraper, I've focused my time and energy on two Zero To Mastery courses by Andrei Neagoie ( Complete Python Developer and Complete Web Developer). After finishing them, I sharpened my tools with another course (Front-End Engineer) from codecademy.com . I figured out that I would enjoy working as a Web Developer, especially on Front-End as a start.

My current goal is to start an internship or work as a Junior Frontend Developer and become a valuable asset for any company that I'll be part of. Even though my experience levels are low, I consider myself as a fast-learner and with a little bit of guidance I could surely fit the needs of the job.

"The Complete Web Developer in 2021: Zero to Mastery" by Andrei Neagoie and Codecademy's Front-End Engineer courses provided me with knowledge when it comes to Front-End like : HTML, CSS, Javascript, React.js and Redux.

However, I am aware that I still have many things to learn, and gaps to fill so I would prefer a job that would give me the opportunity to flourish as a developer. I consider that that I can quite easily adapt and evolve when the environment that I'm surrounded with emanates positivism.
